

Pacific Insulation Products

"Tomorrow's Needs, Today's Products, Service Now"

R-SEAL™ PRIMARY BENEFITS

- Code compliant installed U-Value and simple air barrier compliance
- Installs 10X as fast as MBI (Faster than just BLS Thermal Break Tape)
- True Finished appearance (without extra trim pieces)
- Job specific detailing and layout (Minimal waste)

R-SEAL™ SECONDARY BENEFITS

- Pre-Applied tape tab (2" wide goober tape)
- Install in any weather (rain and low winds irrelevant)
- Rigid enough for one person handling (up to 24')
- Can sheet walls with two person, instead of three person, crew (up to 24')
- Co-ordination with sub trades not required (not held up by sprinkler, HVAC, or lighting)
- Use standard flange brace attachments (save labor and material cost over liner attachments)
- Flange braces do not have to be installed repeatedly (wall application)
- Purlin depth is irrelevant (no surprises in insulation cost if purlins are deeper than 8" or 8.5")
- Girt spacing can be optimized per PEMB (saves over 4' or 5' required for liner systems)
- Wider girts not required to meet wall energy code (R-30 batt is thicker than 8")
- Additional flashing not required (eave and roof/sidewall transitions)
- Can be used in a wide range of buildings (high resistance to building moisture)
- Easier to repair than Insulated Metal Panels (same energy performance at 70% installed costs)
- UV wrapped shipping. (Can stay on jobsite without worry of damage or theft)
- LEED points under IEQ (Indoor Environmental Quality) & EA (Energy & Atmosphere)
